Water Management

Our dishwasher is one of the highest ranked in water efficiency.

Waste Management

- There are paper recycling bins at each work station and only double sided paper is placed in these. Paper that is one sided is reversed and used as the sole stock for one of the office printers
- All printers use 100% recycled paper as the primary stock.

Energy Management

- Lights are switched off in each office as people come and go and aren't left on waiting for the cleaners to come through
- The office has implemented a behaviour change program to encourage the switching off of computer monitors when not in use.

Programs currently participating in

- Committee for Melbourne is currently undergoing a process of signing up to an EPA Covenant to continue promoting these strategies
- Our Climate Change Taskforce went through an audit process and the carbon emissions identified were offset
- The Committee's emissions for 2007/08 were assessed and offset via the purchase of Victorian wind power offsets.

Strategies Implemented

The EPA covenant

Projects to be completed

EPA Covenant

Inventory of carbon emissions for 2008/09 which are then to be offset, as occurred with 2007/08
